

Admin Login

During my internship, I developed an **Admin Login** page for the **ATELIER MAISON** furniture website using **HTML5** and **Bootstrap 5**. The login page provides a secure and responsive interface for administrators to access the management section of the website. It includes a professional login form with email and password fields, ensuring a clean, user-friendly, and responsive design across different devices.

Admin Panel

I also designed an **Admin Panel** that serves as the central dashboard for managing the website. The dashboard is built using Bootstrap components such as cards, navigation menus, tables, buttons, and responsive layouts. It enables administrators to manage furniture collections, organize website content, and navigate different sections through a modern and easy-to-use interface.

GitHub Repository Management

As part of my internship learning, I gained practical experience with **Git** and **GitHub** for version control and project management. I learned how to create new GitHub repositories, organize project files, commit changes, and upload projects to GitHub. This helped me understand professional project management practices and maintain project versions efficiently.

Website Deployment Using GitHub Pages

I also learned how to deploy static websites for free using **GitHub Pages**. This allowed me to publish my web development projects online and access them through a live URL. Through this experience, I improved my understanding of website deployment, code management, project sharing, and maintaining an online portfolio using GitHub.
